

Astuce: nombres copains

$$64 + 78 + 36 + 22 - 45 \xrightarrow{100} 100 + 100 - 45 = 155$$

The diagram shows a calculation with two green arcs. The first arc is above the numbers 64 and 78, with the number 100 written above it. The second arc is below the numbers 78, 36, and 22, with the number 100 written below it. A green arrow points from the original expression to the simplified expression.

$$4 \times 5 \times 25 - 70 \xrightarrow{100} 100 \times 5 - 70 \xrightarrow{500} 500 - 70 = 430$$

The diagram shows a calculation with one green arc above the numbers 4, 5, and 25, with the number 100 written above it. A green arrow points from the original expression to the first simplified expression, and a second green arrow points from the first simplified expression to the final result.
